

A NEW GENERATION FAUCET

touch free *multi purpose*

Unique

Dispensing multiple liquids

Innovative

Latest sensor technology

Economic

Remarkable efficiency

Introducing MISCEA

The MISCEA combines the functions of a faucet and a dispenser in one. This creates a new experience by dispensing water together with a selection of other products. The products of your choice can be any combination of soap, lotion, disinfectant or detergent.

Quality

The MISCEA is made of stainless steel. Its elegant design is accentuated by the interactive user interface. The faucet's head is made of laser engraved glass with LED lighting. The quality of the materials ensures durability even in the most demanding environments.

New Standard

Combining multiple functions in one touch free faucet allows for an overall economic solution. Electronic dosing saves water and other dispensed products. A touch free operation ensures high standards of hygiene and minimizes your cleaning effort: a new standard in dispensing.

Sensor technology

The MISCEA is based on the latest sensor technology with advanced software. Simply moving your hand over the indicated section of the glass daisy a light signal will show which product will be dispensed.

The MISCEA even will allow for motion controlled temperature adjustment. Just bring your hand next to the plus or minus and the temperature will change as indicated by the digital display.

System box

MISCEA's faucets have two main components – the faucet and the System Control box that is mounted below the washbasin. The system control box is the command console and includes the electronic controls, the required pumps and the liquid reservoir.

Last but not least, the MISCEA is easy to install. Using industry standard measures it fits in any washbasin or kitchen environment. The system operates on 12 volt and does not require batteries reducing maintenance needs.

Community MISCEA

The MISCEA is equipped with an innovative-patented connecting system allowing only for qualified suppliers to provide refill products. MISCEA and its suppliers together form a community and are committed to maintain strict quality and environmental standards. The partners in Community Miscea ensure our customers a set of shared values. Miscea: a new standard in caring.

The packaging used to refill your MISCEA consists of vacuum pouches equipped with a Clean Click connector. Each pouch remains vacuum until completely empty and maintaining a consistent quality. They leave no residual product and as the pouches deflate they minimize waste. MISCEA stands for modern and environmentally friendly solutions.

Therefore if you use a MISCEA at home or away you can always be sure that you are kind to your skin, use the latest standards in hygiene while caring or our environment.

On our website you can meet our partners in your country, to order your pouches.
